```

OUTPUT:

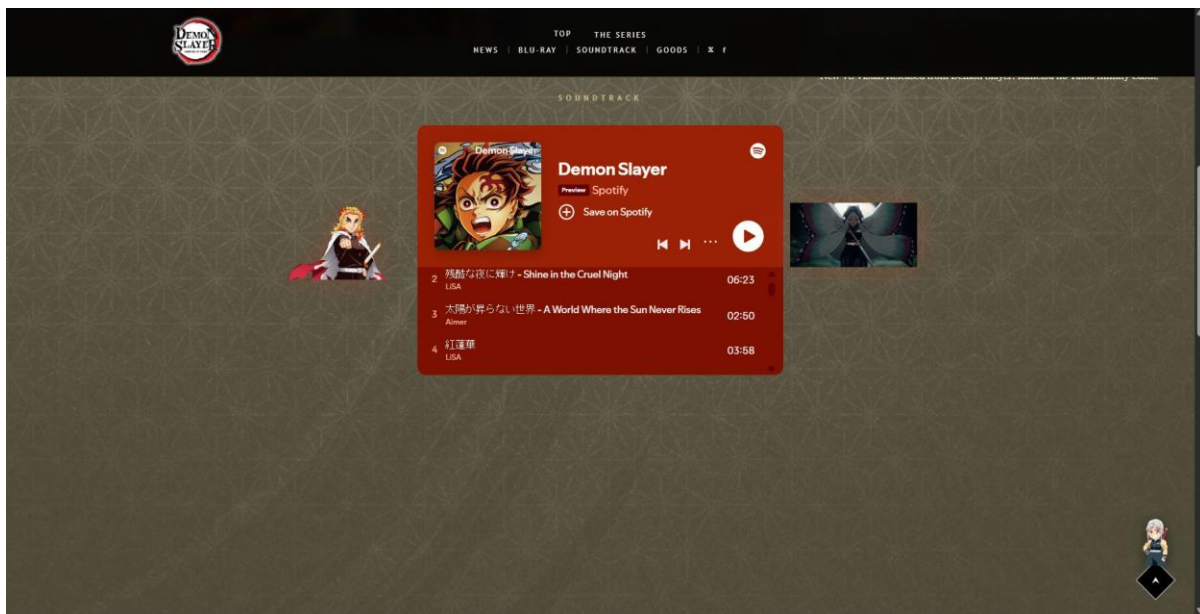

Output 1: Loading Screen

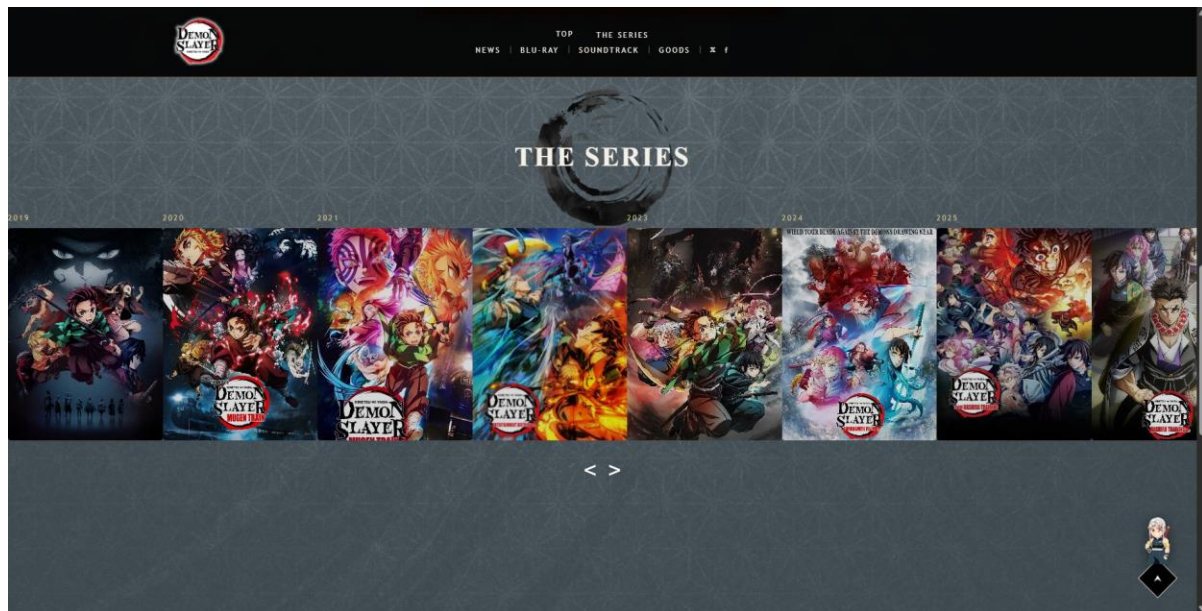

Output 2: Homepage — Hero Slider, Navbar, Trailer & News

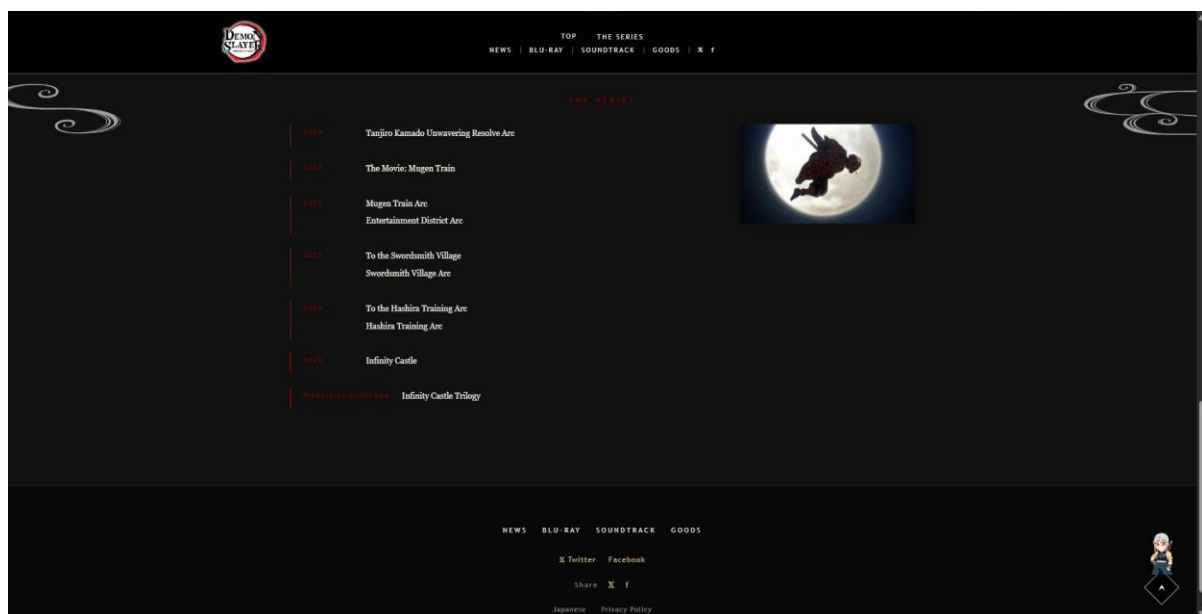

Output 3: Soundtrack Section

Output 4: The Series — Poster Slider

Output 5: Series Timeline & Footer

Project Conclusion — Demon Slayer Clone

This project is a front-end clone of the official Demon Slayer: Kimetsu no Yaiba website (demonslayer-anime.com), built using HTML, CSS, and JavaScript as part of my Web Technologies course in BTech 1st Year.

The website is a single-page application consisting of one HTML file, one CSS file, and one JavaScript file, with a dedicated images folder containing 45 images used across the site.

The page is structured into the following sections: a Loading Screen that cycles through 18 images before revealing the main site, a fixed Header with a two-row navigation bar including a dropdown menu for The Series, a Hero + Trailer side-by-side layout where the left side is an auto-advancing image slider and the right side shows the official trailer thumbnail and latest news, a Character and Soundtrack section embedding a Spotify playlist, a Poster Slider showing all arcs from 2019 to 2025 with prev/next navigation, a Series Timeline section listing all arcs by year with a character illustration, a Footer with navigation links, social media links, a share section, and copyright text, and a Back to Top button that appears on scroll.

Key concepts applied in this project include CSS custom properties (variables) for a consistent colour scheme of dark red, gold, and cream, a multi-colour animated background using `@keyframes bgCycle` cycling through five colours over 60 seconds, CSS pseudo-elements (`::before` and `::after`) used on the body for a layered animated background and texture overlay, a loading screen built with JavaScript's `setInterval()` cycling through image slides at 300ms intervals, a hero image slider using CSS transforms (`translateX`) and JavaScript for auto-play at 5000ms intervals, the `IntersectionObserver` API for scroll-triggered reveal animations on the poster slider, series section, and soundtrack section, CSS Flexbox for the header, hero-trailer row, character-soundtrack section, and footer layouts, a mobile-responsive hamburger menu built with JavaScript `classList` toggling, and a poster slider driven by manual `translateX` offset calculations.

Overall, this project gave me practical experience building a complete, professional-quality single-page website inspired by a real-world production. Working with JavaScript-driven animations, scroll observers, and responsive design helped me understand how modern websites deliver a polished user experience beyond simple static pages.
